

ABSTRACT

An airbag unit for motor vehicles, with a tubular gas generator, tied to a motor vehicle structure, for generating a filling gas for a gas bag. The tubular gas generator is displaceable in the direction of its tube axis in relation to the motor vehicle structure and being in interaction with a deformation element which, under the action of a force which is greater than or equal to a defined minimum force, is deformed and makes it possible for the tubular gas generator to be displaced along its tube axis.
